

IR Extenders for IR Remotes

July 2018

RF (radio frequency) remotes allow equipment to be out of sight. At this time, Verizon does not have RF remotes. We are unsure of a release date for RF remotes. However, Verizon and other Manufacturers' sell Extenders.

Verizon currently has IR Remotes. IR (infrared) Remotes operate on line of sight. **Verizon does sell an IR Extender for \$12. The IR extender** allows equipment to be out of sight with just the 'pigtail' of the IR extender visible.

Please visit the Verizon website to order one or *ask for one from the Tech who installs your equipment.* The Tech may or may not have one on his truck.

IR Extenders may also be self-installed if purchased through another source:

Logitech and other manufacturers sell RF converters, at reasonable prices. A homeowner can purchase IR to RF to IR extender systems; for example, see <http://www.smarthome.com/8045/IR-to-RF-to-IR-Remote-Control-Range-Extender-Kit-433-MHz/p.aspx>.
