

## **QAM Tuners**

August 2018

Plugging the cable directly into a Television that has a QAM Tuner embedded in the TV will give you the major networks; ABC, CBS, NBC and the channels listed under Southeast Region Pennsylvania only.

Fast forward, pause, The On TV Guide and other advanced features, for example, watching recorded shows are not available.

The proper Input will also have to be experimented with as it may be different on each Television set up. Use the Remote that comes with the television for this. Look for an Input button. Follow directions in the TV manual that came with the TV or on the screen.

Verizon does not assist with this because it is not Verizon equipment.
